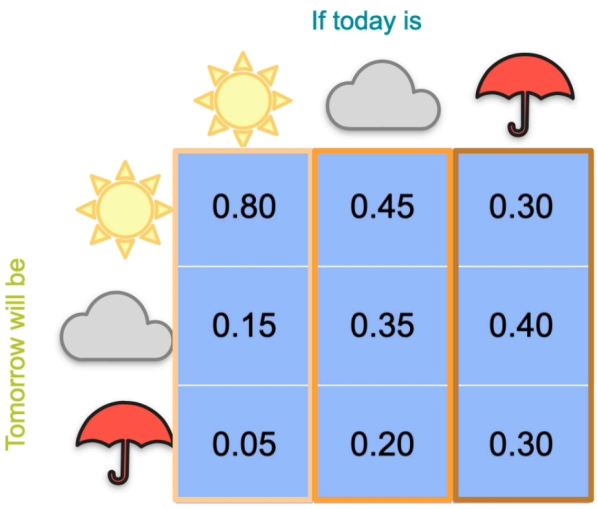
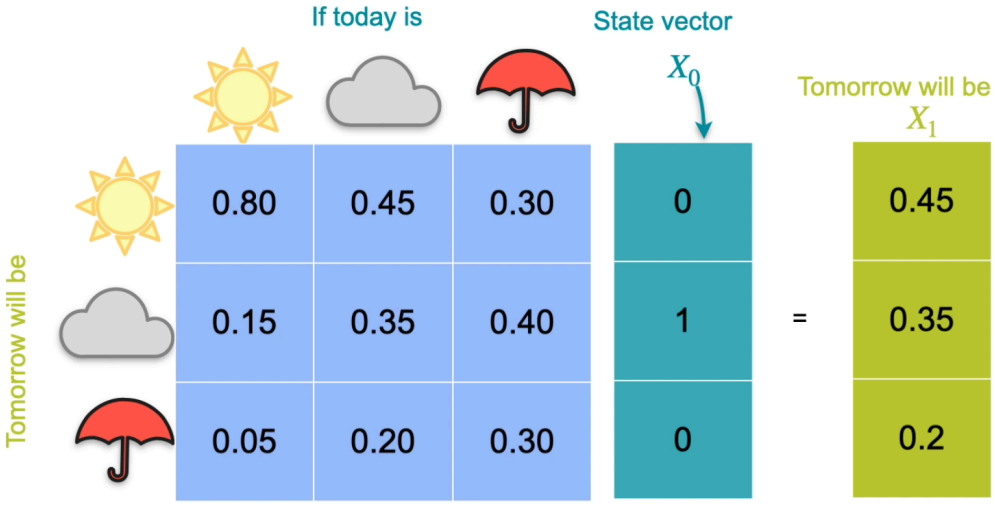
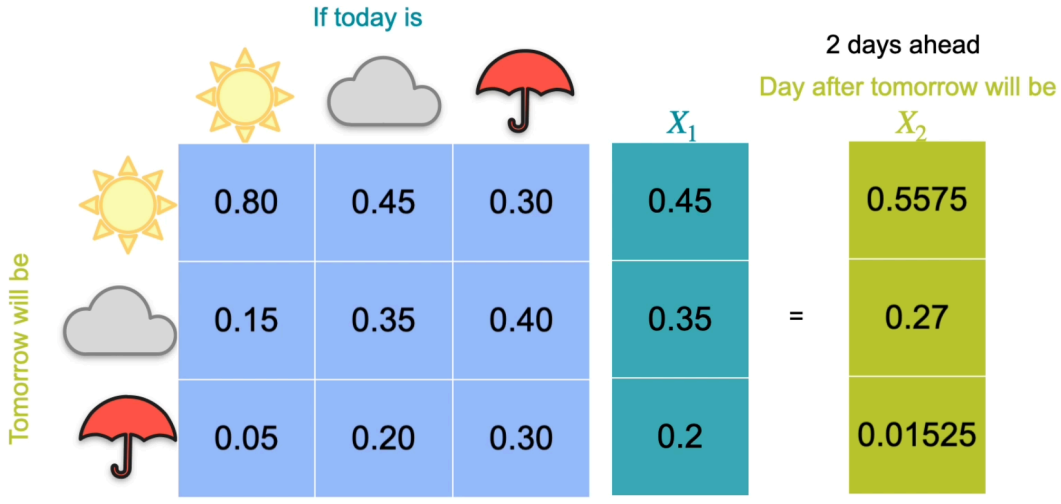
Discrete Dynamical Systems

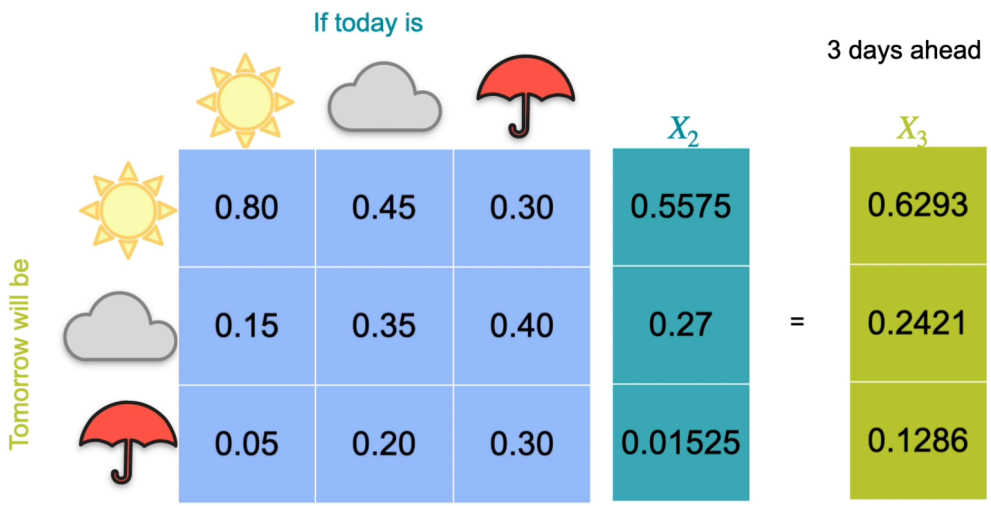


All values are positive
and
columns add to 1

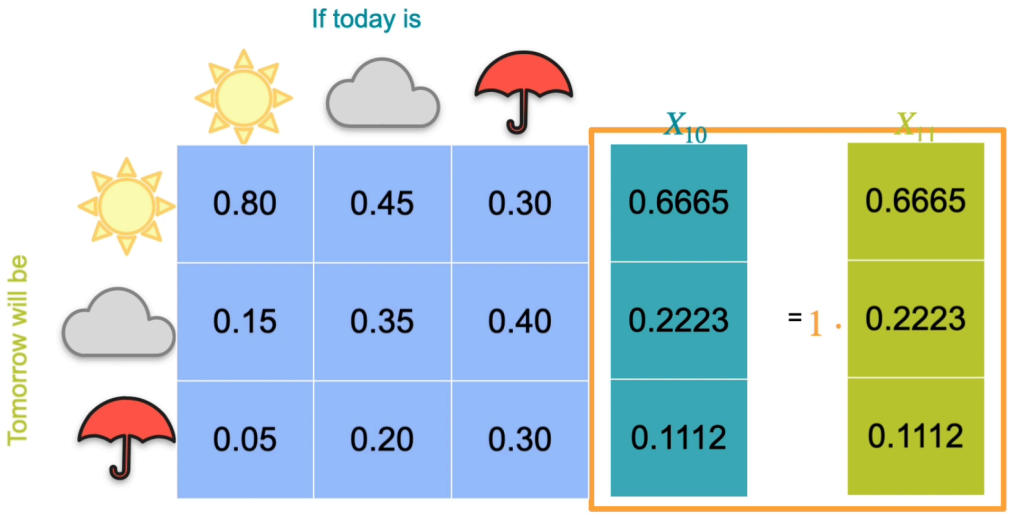
Markov matrix

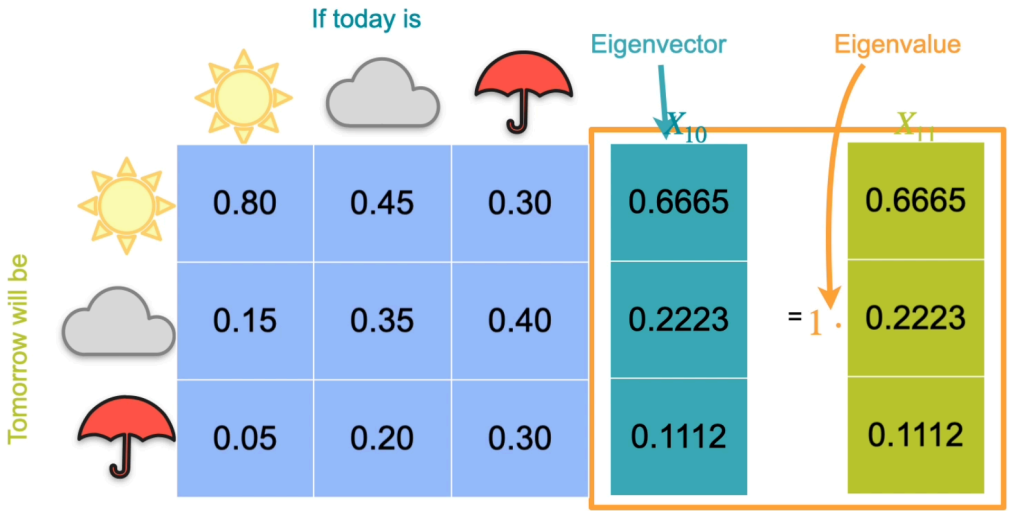






we continue doing it until





Walllah, we get the Eigenvector and Eigenvalue

Transition matrix

$$P$$

0.80	0.45	0.30
0.15	0.35	0.40
0.05	0.20	0.30

Equilibrium vector

$$X_\infty$$

0.6665	
0.2223	
0.1112	

Long run probabilities
